Ahmed Osama Abdalla

Backend .NET Developer

ahmed.osama001@outlook.com 01002275366 Cairo, Egypt ahmed-osama-72a255241

github.com/Megawy

Profile

Backend .NET Developer with 1+ year of hands-on production experience designing and maintaining microservices architectures using ASP.NET Core. Led the design and delivery of a 12-service production platform including API Gateway, event-driven messaging (Kafka), and real-time communication (SignalR). Strong background in Clean Architecture, CQRS, and secure authentication systems. Self-taught developer with 3+ years of programming experience, transitioning from a Commerce background into backend engineering.

Professional Experience

Back-End Developer | GoGetOffer 07/2025 – 08/2026

Cairo,Egypt

- Designed and delivered a production-grade microservices platform (12+ services) using ASP.NET Core, C#, and Clean Architecture, live in production for a full year - Built a centralized API Gateway using YARP to route and secure traffic across all microservices, enabling unified authentication and request handling
 - Implemented event-driven communication with Apache Kafka and Redis caching, reducing inter-service coupling and improving response times for high-traffic endpoints
 - Developed a Realtime Gateway with SignalR to support live features (chat, notifications)
 - Designed and enforced secure JWT-based authentication with Role-Based Access Control (RBAC) across all services
 - Applied CQRS, MediatR, FluentValidation, and AutoMapper to ensure clean separation of concerns and maintainable code across the codebase - Led a backend team: assigned tasks, reviewed pull requests, and mentored developers on architecture and coding standards
 - Worked directly with the CEO to translate business requirements into technical roadmaps, owning architectural decisions end-to-end - Set up GitLab CI/CD pipelines and Dockerized deployments, streamlining releases and reducing manual deployment steps
 - Integrated centralized logging (Serilog) across services for production monitoring and faster incident diagnosis

Skills

Backend Development: ASP.NET Core, Web API, C#, .NET, MVC
Architecture: Microservices, Clean Architecture, CQRS, SOLID Principles, Repository Pattern
Messaging & Caching: Apache Kafka, Redis
Databases: SQL Server, PostgreSQL, Entity Framework Core
Security: JWT Authentication, Role-Based Access Control (RBAC)
API Gateway & Realtime: YARP, Ocelot, SignalR
DevOps: Docker, Docker Compose, GitLab CI/CD, Git
Libraries: MediatR, FluentValidation, AutoMapper, Hangfire, LINQ
Testing: xUnit (Unit Testing)
Monitoring: Serilog
Core Competencies: Technical Leadership, System Design, Requirements Analysis

Projects

E-Commerce Microservices (Personal Project)
- - Designed and developed a microservices-based e-commerce platform using ASP.NET Core
- - Implemented Authentication Service, Product Service, API Gateway, and Shared Library
- - Applied Repository Pattern, Service Layer, Clean Architecture, and JWT Authentication - Containerized services using Docker with inter-service communication

Resilient Notification Service (Personal Project)
- Built a production-style .NET microservice with rate limiting, Redis caching, and Docker containerization
- Implemented unit tests (xUnit) covering core business logic
- Designed with Clean Architecture and documented with architecture diagrams

Education

Bachelor of Commerce (Accounting) Cairo, Egypt
Al-Azhar University College of Commerce
Self-taught software developer since 2022, specializing in Backend Development with ASP.NET Core and Microservices architecture alongside academic studies.

Certificates

- ITI - ASP.NET Core Track

Languages

Arabic — Native • **English** — Good
